Mission: To find out defects in "my account" and "report issue" menu on
http://www.bugrepository.com/

Tester: Pavan SHIDANKAR

Time started: 10.54 Pm

Time stopped: 6 PM
Here I proceed:

Good thing in the website is that's in her Simplicity. It's very simple and much comfortable to report errors, to practice testing for a new tester.

1.Report issues page

I found following issues:

1) Drop-down menu *category* was empty.

2) What is the of meaning "N/A" option is *reproducibility* field. A bug can be either reproducible, or not reproducible by a tester.

3) I enter test data "1 " into summery and description field. it accepts it

   Problems associated with this:

- Lots of fake data can be entered in website database.
- What if it allows SQL injections queries into summery field and description field?
- Fake no of defects reported, (if we got xxxxx defects in database there can be actually xxx reported), credibility of website will down if we market that we have certain no   xxxxx of defects reported.

4) I enter test data in
   - Summery field all 128 characters
   - Description field all 1000 characters

     While viewing the above reported issues, the user need to scroll window to right to view all words, as below
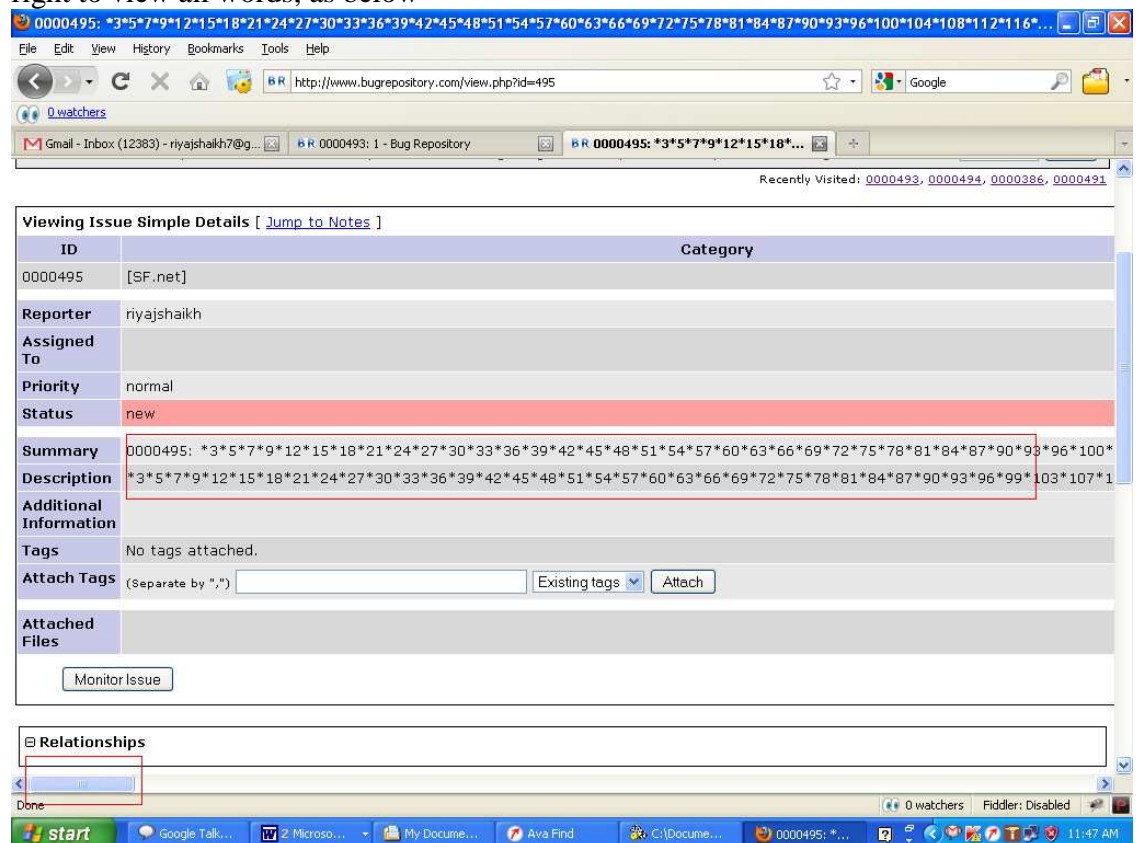

5) *category* field is "required " field in report issue , still a user can submit report successfully without choosing "specific category " in drop down menu.

6) Different fonts used for typing words in *summary* and *description*
A consistent font can be used all over the text fields in website.

7) Cursor should be active and its location needs to be by default on *password* field. Actual Result: Cursor is not active after opening *report issue* page.

8) I input in *password* and *confirm password* field 4 spaces as test data. Clicked on *update user* and data is "successfully updated" message appears on page.

I log out the session, then I cannot login with this new password, instead my old password works for login field.

Problem: 1. After entering data as 4 spaces, password should not allowed to update as this is weak password
2.message should not be appear as "successfully updated " if data is not updated actually

11) I enter email id as Santhosh.Tuppad@gmail.com as this is seen in left corner of a page and it got updated successfully.
Problem: Anybody can enter different ID and can use them until period of 7 days.

9) I entered real name as "Santhosh Tuppad " and tried to *update user* .As expected the message appears, as "This is login name of different user."

But When I input same name with spaces before name as " Santhosh Tuppad" The name is updated successfully.

Problem: A name with spaces is allowed. As this example any users name can added here. This field needs to validate that.

10) There is no *help* link .A help would adds to usability of a website. This help file will contains the different menu options, how to use the website etc.options.

14) An .exe file can be uploaded in report. This can be harmful as most virus file can go in database by this way.

15) A hyperlink can be added in *summary* line. This can be harmful if this hyperlink is linking to a page, which can cause potential harm.

In above image, a summary line is added with hyperlink. If we click on harmful website's hyperlink, It can cause problems.

16) In *Report issues* page there is no option for adding *tags* in reports , while in *view issues* page , there is label for *tags* .

 Problem: To attach *tags* user needs to in *view issues* page and add tags there. Wastage of time.

2.My account page:

Issues:

1) I can set password of only "1" word length

   .**Problem** : Security flaw. Its very easy to guess the password which is one word.

2) I can erase email-id after and *update user* successfully. Severity : High

3) Same as 2nd issue above, a user can erase his real name from and I *update user* successfully

4) Invalid username is allowed *test data :*   hjjds@dfdfd.dssd
                                               sdsdsds@fd
   This field needs this validation

5) Spaces allowed as a name in real name field and email id field. Needs validations for that.

6) *add profile menu :*

- I leave all fields empty and following message appears

APPLICATION ERROR #11

A necessary field "Platform" was empty. Please recheck your inputs.

Please use the "Back" button in your web browser to return to the previous page. There you can correct whatever problems were identified in this error or select another action. You can also click an option from the menu bar to go directly to a new section.

This message does not shows the that user has not input *all* necessary fields. A User has a wrong impression that he has to fill only one field next time .If I enter only this *platform* field I got message to fill operating field.

Problem: wastage of user time.

- Following error message appears on page (highlighted by red colored rectangle)when was entering details on the *add profile* page
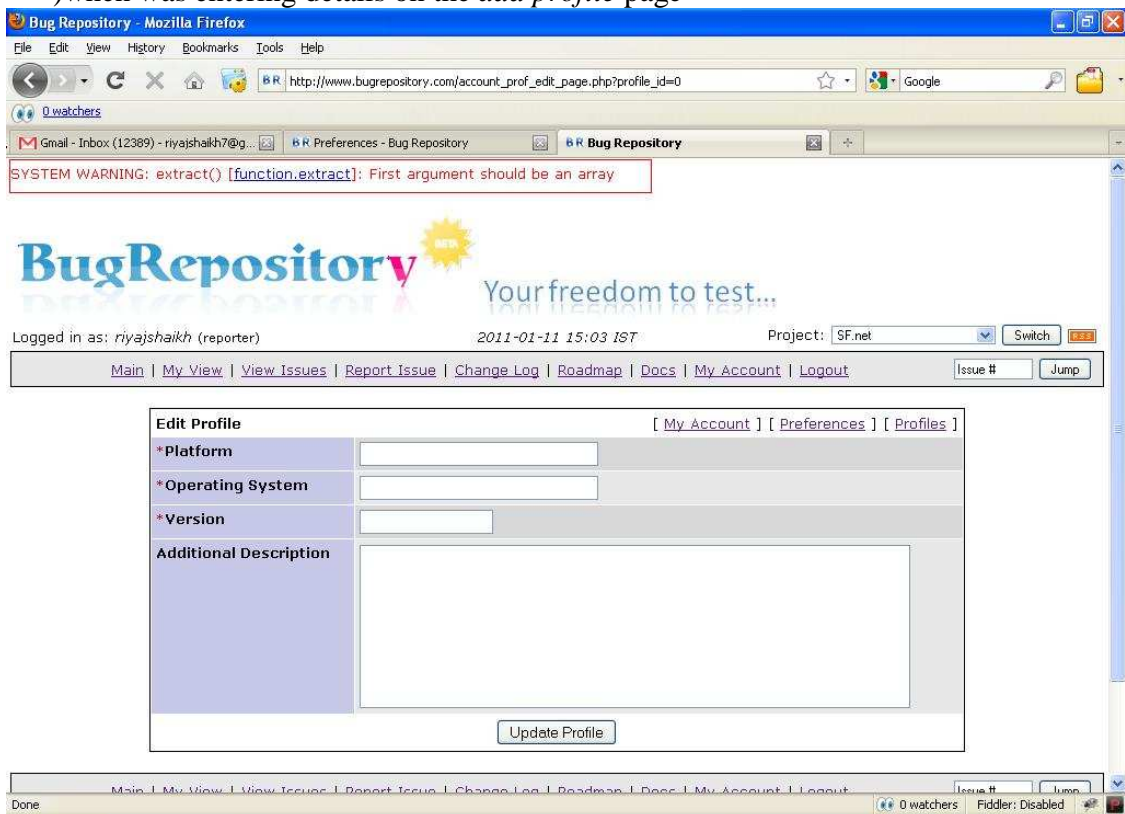

I couldn't reproduce the bug.

7) In below "Make Default " option does not make a particular profile default for that user. Expected: When I select "default profile " it should be added and can

be viewed in issues after reporting issue. Actual: After entering details in report page (not in advanced report) if that report is viewed (view issues) these default details are missing.

8)Multiple times same profiles are allowed to submit and save.(which have same *platform, operating system* and *version*)

9) Cursor should be active and its location by default should be on *platform* field. Actual: Cursor is not on this field; cursor is not active by default.
